

## → WHAT IT IS

Powerful media workflow automation platform.

## → FOR WHOM IT IS

Ideal application tool for broadcast and entertainment companies, service providers and content creators.

## → WHAT STANDS OUT

- Reduces time-to-market
- Grows with you using a scalable system architecture
- Protects your business with redundancy & high availability
- Prevents unauthorized usage of content
- Reduced TCO with simplified setup/configuration and time saving

## → WHAT OTHERS SAY

„With BOSS MEDIA Exchange we found a scalable and performant platform for our centralized ingest. Journalists, external partners, agencies and our employees use Media Exchange for exchange with the intuitive user interface including 24/7 end-to-end monitoring.“  
*(Swiss broadcaster)*

# BOSS MEDIA Exchange (BME)

## Powerful media workflow automation platform for broadcasters & CSPs

In the media industry, managing diverse formats and large volumes of data is a significant challenge. As content and control become increasingly complex, the need for efficient management and control grows. BOSS MEDIA Exchange (BME) addresses this by automating workflows and integrating third-party systems, ensuring transparency and reducing manual errors. With the growing number of delivery channels and systems, BME streamlines operations, making day-to-day business more manageable and efficient.

### Creating and managing complex workflows in a new dimension

BOSS MEDIA Exchange (BME) empowers you to create and manage complex workflows while seamlessly connecting with third-party systems. By encouraging the reuse of proven solutions, processes, and sub-processes, BME ensures consistency, repeatability, and transferability through automation.

### Streamline and automate your processing

BME accelerates your file operations by orchestrating storages and third-party systems in your technical and distribution workflows, whether triggered automatically or manually. With our visual workflow builder, you can easily create workflows in minutes, allowing your employees to focus on their main tasks while our engine handles the administrative duties.

## Increase visibility and take control

Your content is crucial, and BOSS MEDIA Exchange (BME) ensures you have full control over your data and access rights. With role-based permissions, directory access rights, and comprehensive process monitoring, you gain complete insight into all system activities. Detailed logging information directly in the interface allows you to easily identify and resolve problems and bottlenecks. Take charge of your media workflows with BME and experience unparalleled visibility and control.

## Outstanding functionalities

**Multi-tenant solution:** Role-based permissions and access control ensure users see only their specific content, processes, and workflows.

**Access control:** Seamlessly connect BME to your LDAP system or create temporary local BME users.

**Upload- and download-links:** Generate links for external partners to upload or download content without registration or platform access.

**Process Monitoring:** Enjoy end-to-end monitoring of ongoing processes with notifications for any failures

**Multi-platform:** Install BME on-premise, in public or private clouds, or in hybrid mode.

## Multisite capable and scalable system

BOSS MEDIA Exchange (BME) supports multisite structures, enabling file management and sharing across multiple locations. Work seamlessly across sites and with external partners using BME as your exchange platform. Register partners or provide upload links for easy content submission and workflow triggering. Our flexible architecture grows with you, allowing independent addition of services as needed.

## Quickly adapt changes

BOSS MEDIA Exchange (BME) offers simplified configuration, empowering your in-house team to customize every system element, including workflows. With the BME REST API and Scripting Module, you can seamlessly integrate with existing systems and swiftly adapt to changes.

## REST API

Rapidly create and deploy new services, integrating BME with third-party systems or customer applications.

## Scripting module

Integrate existing scripts, applications, or third-party systems, and implement custom functions to enforce specific business rules or workflow handling.

## Seamless integration

Need to integrate a third-party application with our BME but can't use our REST API? Our software engineering team can build a custom adapter for you. Enjoy smooth and efficient integration tailored to your needs.

## → Who we are.

Dimetis is a carrier grade software development company that serves the media and service provider industry.

At Dimetis, we strive for a future where innovation drives success through simplicity. By leveraging state-of-the-art technology and fostering strong partnerships, we aim to deliver cost-effective solutions that empower our clients and be part of the transformation.
